

# Money Market Portfolio Optimization Brief

Prepared by: Treasury Liquidity Desk  
Portfolio: PORT\_204

Objective. The desk seeks to **maximize net yield** across the eligible money market fund universe while preserving intraday liquidity and staying within our concentration policy.

## Constraints.

1. Daily liquidity must be at least 30% of assets under management.
2. Weekly liquidity must be at least 50% of assets.
3. Weighted average maturity (WAM) must remain below 60 days.
4. Prime funds are limited to no more than 40% of the portfolio.
5. No single fund may exceed 45% of total assets.

## Scenario analysis.

Please also evaluate a liquidity stress scenario in which daily and weekly liquidity requirements are raised, and a credit stress scenario reflecting a downgrade wave.

Deliverable. Provide a recommendation with the optimal allocation and the binding constraints.
